

My Favorite Application

(Facebook)

My favorite application is Facebook, I've been using it since 2009 and met many people because of it. I'm using Facebook everyday if I have free time or I don't do anything, I share many stuff especially memes from Facebook because it's funny and entertaining at the same time. I have met different kinds of people and became friends with them that's why I consider Facebook as one of my favorite app. Why not Twitter? Or Instagram? What features does the Facebook have compared to other Social Media Sites? Well, basically for me Facebook is combination of Twitter and Instagram since you can use it on what you prefer, you can post pictures, write a story without limiting your words and it is easier and comfortable to use. There are toxic people in Facebook especially those who are using dummy accounts to spread fake news but since I'm knowledgeable about what true and what is false I don't fall victim to those who are spreading toxicity in Facebook Community so we need to be careful on what we click or what we share.
