

R2: Introduction to Design Thinking Process

At first, I don't really care about doing the design of anything I make back then when I was in high school. I always pass my project as simple as possible because I know in myself that I really suck at presenting or designing a project. I always suck when it comes to art, I don't know how to draw (only stick figures) and having hard time doing it but I realized that in Design Thinking Process, you don't have to be good at drawing or anything related to art because in Designing you have to consider your users. You're doing your application for the user and not for yourself, I always do the research or program but I always pass the Design part of the project since I can't really make something out of my ideas but I have observed that I have good eyes for different designs, I can criticize or do some feedbacks regarding designs on what is good about that and what should be improve. I realized in the end that I can still make a better presentation or design when I consider different things like the user and the function of the application I'll be doing.
